Calyxia signs distribution agreement with Grolman Group for Catalyx™ platform in EMEA composites markets

- **Grolman Group will distribute Catalyx™ product platform across EMEA for all composite applications**
- **The partnership expands market access to Calyxia's microencapsulated epoxy accelerator solutions in composite materials**
- **Catalyx™ enables ambient-stable latency and rapid on-demand curing, radically improving processing efficiency and sustainability**

Calyxia, an Industrial B2B CleanTech innovator specializing in advanced and sustainable microcapsules, today announced a distribution partnership with **Grolman Group**, a global specialty chemicals distributor for a circular future. Under the agreement, Grolman Group will distribute Calyxia's **Catalyx™** microencapsulated accelerators across **EMEA** for **composite applications**.

The Catalyx™ platform is designed to unlock new levels of performance and productivity for epoxy and composite systems. Through Calyxia's proprietary microencapsulation technology, Catalyx™ delivers **ambient-stable latency** combined with **fast, on-demand cure activation**. This allows formulators and manufacturers to reduce or eliminate cold-chain logistics, increase throughput, lower energy consumption, and minimize scrap—while remaining compatible with existing manufacturing infrastructure.

Dr. Mathias Dietz, Global Product Manager Performance Materials, Grolman Group comments:

"Grolman Group is excited to partner with Calyxia to bring the Catalyx™ platform to composites customers throughout EMEA. Calyxia's encapsulation technology represents a step-change for epoxy and composites processing, and we look forward to helping customers translate these benefits into real-world performance and efficiency gains."

Jamie Walters, CEO and co-founder of Calyxia:

"Calyxia is very happy to collaborate with Grolman Group to speed up the market introduction of Catalyx™ in EMEA's composites markets. Grolman's technical knowhow, EMEA-wide presence, and intimate customer relationships ideally position our new partner to scale the impact of our microcapsule-based solutions very fast. Together, we enable manufacturers to realize, reliable and-sustainable composites production."

The agreement reflects Calyxia's continued expansion in Advanced Materials, building on growing demand for microencapsulated solutions that improve industrial performance while reducing environmental impact.

About Calyxia

Calyxia is an Industrial B2B CleanTech innovator based in the Paris region, France, that designs and manufactures the world's first advanced and sustainable microcapsules and microspheres. Calyxia, with the motto "Advanced Sustainable Chemistry", harnesses and combines pioneering technologies in chemistry and emulsion science to develop new industrial solutions for a/ wide range of applications. Calyxia partners with world-leading manufacturers in the Agriculture, Home & Beauty and Advanced Materials industries to help unlock an advanced and sustainable future for all. Its products create a step-change in the environmental footprint, cost-effectiveness and performance of everyday products that are essential to our quality of life.

About Grolman Group

At the family-owned Grolman Group, we distribute the next generation of specialty chemicals to make the future of our industry - a profitable circular economy - work for you. Run by the 5th generation, our business has faced transformative challenges and emerged stronger each time, embodying a "Grow New" mentality. Today, we invite you to make the next transformation work for you with us: transitioning from linear to circular.
